

## Off Licence, On Licence and Franchise Stores

Only one system does it properly: **POSperfect for both  
Bottle store and Bar/Restaurant**

POSperfect was originally designed for Retail, with strong Sales, Inventory, Reporting and Multi-Branch/Location features. Building on these strengths Today Software has developed a range of features for the Hospitality market with a strong focus on businesses that require both On-Licence and Off-Licence liquor sales, rather than the specialty dining or fast-food markets.

- Manages liquor stock across each location quickly & simply (scan out only), with full audit trail
- No gaps for stock loss across locations. No excuses!
- Performance tracking of each retail unit and Enterprise
- Franchise Bottle Stores can use National Database AND Local Hospitality products combined in one system
- Robust - POS Terminals can sell when offline (Server or Cloud)
- Software permanent License or Rental (SaaS)

### Hospitality Features

#### 1. Flexible Touch Screen POS system providing:

- Multiple Location Button configurations.
- Table and Tab Management.
- Split Bills and Split Items.
- Kitchen Printers.
- Customer Order Displays.
- Windows Tablet Mobile Terminals.

- Promotions by Date & Time and Happy Hour Functions.
- Internal and 3<sup>rd</sup> Party Loyalty system options.

## 2. Restaurant Features:

The system can manage Table orders against tables or as pre-paid Counter (Bar Meal) sales where the customer has their Order Number on the receipt and the Kitchen Items are printed on the Kitchen printer.

The system currently uses generic flexible POS functions (product linkages), rather than purpose written Hospitality functions for handling Cooking Instructions and Condiments. These fit well for Cooking Instructions but enhancements are being made to provide more options in the way Condiments are handled.

Prior to any installation, special attention will be given to this (order entry) process to ensure the system fits with the end users expectations. Any required (compliances) changes will be agreed in writing and made to the system, but unless notified at the time will not incur software development costs.

## 3. Inventory Management Features:

- Stock management by each location.
- Support Bottle-Store Sales to Bar/Restaurant Sales or Stock Transfers.  
Items scanned out as sales automatically post into Bars/Restaurants.
- Pricing by Location managed in the Master Terminal of that location.
- PLU Sales by Keg, Crate, FYO, Pack, Bottle, Nip all deduct proportionally from SKU (Stock Keeping Unit) for accurate stock management.
- Stocktake by any SKU or PLU (Outer or Inner Pack Qty).

## 4. Reporting:

- Multi-Location system provides Back Office reporting for each location individually or all combined.
- Flexible Product Groups. Hierarchical and User defined e.g., Brands, Pack Types.
- Extensive Product Sales and Inventory reports across any date period with drill down to Audit Trail.
- Transaction reporting by Day, Hourly and Half Hourly Sales (transactions) reporting.
- EOD and Detailed Stock and Sales Audit Trail.
- Detailed Cashier and Productivity Reporting.
- CRM capabilities: Customer Purchase History, Kiosks, Debtors, Loyalty, Gift Vouchers, Gift Cards, Loyalty Vouchers, Email/Invoice.
- Accounting Interface (MYOB and Xero).
- Flexible EOD reporting and till balancing.

**Licensing and Pricing:** Both SaaS or traditional (permanent) licensing. Prices vary according to the number of retail units, number of terminals and features required.
